RFS: The RFS amount is the overall total of biofuels under the expanded Renewable Fuels Standard.

Advanced: The amount of Advanced Biofuels is included within the overall RFS. Advanced means renewable fuel other than ethanc derived from corn starch with a lifecycle greenhouse gas emission at least 50 percent less below a baseline set by the EPA Administ The Cellulosic and Biomass-Based Diesel amounts are within the Advanced category.

Cellulosic: The amount of Cellulosic biofuels is included within the Advanced amount and must achieve a lifecycle greenhouse gas emissions level that is at least 60 percent below a baseline determined by the EPA Administrator.

Biomass-Based Diesel: The Biomass-Based Diesel amount is included within the Advanced Biofuels amount. For the years 2013 and the amount of Biomass-Based Diesel is to be determined by the EPA Administrator. For purposes of the above table, it is assumed t an amount equal to the last year specified in the legislation.

Conventional: The term conventional biofuel is defined as corn ethanol in the legislation. The level of conventional biofuel required is overall RFS amount minus the advanced amount. *(source: Governors' Ethanol Coalition)*
